

GLENN MURRAY

Forward Deployed Engineer | AI Product Engineer | AI Systems Architect

São Paulo, Brazil (UTC-3, full US East Coast overlap) • Irish / EU citizen • Remote

murrayglenn75@gmail.com • linkedin.com/in/glenn-patrick-murray • github.com/murrayglenn75-beep

PROFESSIONAL SUMMARY

Forward Deployed Engineer and AI systems builder who turns ambiguous business problems into deployed, decision-ready products. Works end to end from discovery through architecture, AI integration, evaluation, and deployment. Known for a “signals before AI” approach: verifiable rules and evidence layers produce the facts, while models explain or assist only within explicit boundaries. Brings 17+ years across industrial engineering, manufacturing, operations, and project delivery to production AI work.

SELECTED IMPACT

- **Signet** - built a hash-chained, event-sourced audit kernel for professional-services operations; reached kernel v1 with all 10 acceptance tests passing after the test suite exposed a real PostgreSQL concurrency flaw.
- **CFO OS** - built a nine-view financial operating system using NetSuite-, Salesforce-, Gusto-, Mercury-, and Brex-style datasets; reduced a modeled monthly-close workflow from roughly 75 hours to 5-10 hours.
- **AXO Engine** - audited and hardened an enterprise decarbonization and governance platform, replacing a non-deterministic entropy engine with DB-derived computation and fixing a broken compliance-tracking path across 12 reporting frameworks.
- **RAD Design Engineering** - reduced manufacturing costs by 22%, shortened design-to-market time by 30%, and contributed to 18% sales growth through engineering and process optimization.

PROFESSIONAL EXPERIENCE

Forward Deployed Engineer / AI Product Engineer | *Independent* 2024 - Present

Remote delivery of AI systems, technical prototypes, evaluation frameworks, and client-facing decision tools.

- Lead discovery from loosely defined business requirements, convert them into verifiable acceptance criteria (e.g., Signet: 10/10 acceptance tests passing across three consecutive fresh resets), and deliver working systems across architecture, data, interface, deployment, and handoff.
- Design deterministic-first AI architectures in which calculations, reconciliations, policy checks, and risk signals are computed before any model call — an approach that has caught real defects (concurrency flaws, non-deterministic logic disguised as computation) before shipping.
- Build with TypeScript, Next.js, React, Supabase/PostgreSQL, Google Cloud, Vercel, Claude, Gemini, and MCP-based integrations.
- Use structured prompting, human-in-the-loop review, adversarial evaluation, traceability, and explicit AI boundaries to improve reliability and adoption.

AI Trainer & Evaluation Project Manager (Contract) | *micro1* Jul 2025 - Present

- Design structured prompting, scoring rubrics, and HITL evaluation workflows for recruitment and manufacturing-oriented AI systems.
- Identify reasoning gaps, bias indicators, data-quality issues, and tool-use failures; translate findings into practical feedback for model and workflow improvement.
- Apply Lean Six Sigma and operational-quality methods to improve consistency, repeatability, and auditability of AI evaluation.

Project Manager (Contract) | *Crystalia Glass LLC* Dec 2025 - Mar 2026

- Managed technical validation, manufacturing coordination, client communication, scope integrity, and production readiness for custom architectural glass and steel projects.
- Acted as the central project authority across design, procurement, fabrication, installation planning, and financial milestones.

Industrial / Design Engineer | *RAD Design Engineering Ltd* Feb 2019 - Jan 2024

- Designed commercial stainless-steel systems, production tooling, and manufacturable solutions from concept through release.
- Improved cost, throughput, quality, and delivery performance through structured engineering analysis and Lean process improvement.

CORE CAPABILITIES

AI Systems: LLM integration, deterministic pipelines, evaluation, HITL, RAG concepts, prompt/context engineering, MCP, evidence-grounded narration, trust and safety boundaries

Product & Delivery: discovery, requirements decomposition, rapid prototyping, client demos, acceptance testing, workflow design, adoption, technical documentation, stakeholder communication

Engineering & Data: TypeScript, SQL, Python fundamentals, Rust exposure, React, Next.js, Vite, Tailwind, Supabase, PostgreSQL, REST APIs, event sourcing, system architecture

Cloud & Tooling: Google Cloud Run, Vercel, Git, GitHub, CI/CD, Claude Code, ChatGPT, Gemini, Codex, n8n, Make, Zapier

EDUCATION & CERTIFICATIONS

- Bachelor of Engineering, Industrial & Systems Engineering - Griffith College Dublin
- National Craft Certificate, Metal Fabrication - QQI Level 6
- PMP - Project Management Professional
- Lean Six Sigma Green Belt
- AI Agents with Model Context Protocol - Vanderbilt University
- Leadership & Management Training for Tech Managers - Packt
- Google AI Specialization and Google Prompting Essentials
- Systems Engineering - MathWorks
- Introduction to Statistics - Stanford University
- DeepLearning.AI Data Engineering Professional Certificate - In Progress
